

Special hot foil stamping tool "shadow secure" by Pro gravur AG

Based on a geometrical achromatic image, we produce high resolution stamps in the deepness of 15 – 25 microns and very small linewidths. With this stamp you can protect your brand on packaging material, like carton, paper, plastic, fine leather. Generally it can be used with any kind of foil. Some parameters as colour or the foil construction can have more or less influence on the quality of the stamped shadow secure image. We create the end design in our artwork department or make the necessary modifications of delivered artworks for technical reasons.
